

DONEGAL COUNTY COUNCIL
RECEIVED

- 2 JUN 2022

CENTRAL PLANNING UNIT

30/5/2022

Dear Planner,

I am writing in support of crucial changes Council propose to policies in the 2018 - 2024 County Development Plan. I am firm Donegal has done more than its fair share in the rollout of tur many counties we are at saturation point. We need to protect landscapes and conserve our valuable peatlands – after all the main carbon store.

Therefore, I am glad that Council finally intends to place some am in favour of your map that shows most of the county as nc However, I accept the logic that areas already despoiled by tur considered for upgrade works. It seems to me to be common outdated low power turbines be replaced, on the same site, wi number of more powerful turbines. Thus, Donegal can still be power without destroying other greenfield, often peatland site

There should be no turbines in boglands. Is that not the simple disastrous Meenbog bog burst which has caused huge enviro destroyed fish life in the Mourne river? I wholly support the fiv

No turbines in Glenveagh National Park area

No turbines in the stunning Gweebarra river valley

No turbines in areas of FHSA

No turbines in areas of EUSA

No turbines in fresh water peat...

No turbines in St John's Point

Thank you for the opportunity to participate in this public cons
